

## **How to use growhouse sdk in simplicity studio**

-> Clone growhouse project from [git.einfochips.com](https://git.einfochips.com). If you are not having access of growhouse project you may contact vishal vyas/ Hasteen patel.

1. Open Simplicity studio.
2. Close all the project in Simplicity IDE un Project Explorer bar.
3. In Topbar click in Window->Preferences->Simplicity Studio->Device Manager-> SDKs
4. Deselect all checked entries in SDKs and click Ok.
5. Again, In Topbar click in Window->Preferences->Simplicity Studio->Device Manager-> SDKs
6. Click on Add, Browse the growhouse/gecko\_sdk\_suite/v2.3  
Gecko SDK suite should be detected in window. If not there might be some issue in cloning the project. You may contact growhouse engineering team for that support.
7. If SDK is detected than click on ok.
8. You selected SDK will appear in List of SDKs, Next click on ok and you are done.

## **How to import project in Simplicity Studio:**

-> When you clone growhouse project, formware codes for enddevice will present in growhouse/gecko\_sdk\_suite/v2.3/app/builder directory.

- 1) In simplicity studio, select File-> import
- 2) Browse the project that you want to import.
- 3) project sls file will appeared in detected project list, Click on that Simplicity Studio (.sls) file
- 4) Then click Next
- 5) Check the board configuration file.
- 6) Uncheck (Use default location) check box
- 7) Finish, You project should be displayed in Project Explorer in Simplicity IDE.
